Jj

J, j /dʒeɪ/.
The tenth letter of the modern English alphabet, orig. a modification of the letter I. From the 11th to the 17th cent. the letter I, i represented both the vowel sound of *i*, and the sound /dʒ/. To keep the inconspicuous small i distinct various scribal expedients were used: an initial i was often prolonged above or below the line, or both; a final i was generally prolonged below the line; and in both cases the tail in cursive writing at length became a curve. The 'dot' was also used with the tailed form, giving rise to the mod. letter j. This was at first merely a final form of i, used in Latin in such forms as 'filij', and in roman numerals, as j, ij, iij, vj, viij, xij. In the 17th cent. the two forms of the letter came to be differentiated, i remaining for the vowel and j being used for the consonant, with the capital form of the latter, J, being introduced. The sound normally represented by the letter in English is the palato-alveolar affricate /dʒ/. In certain words, esp. in proper names or alien terms from German and other languages, j retains the Roman value /j/. In a few French words, distinctly recognized as alien, j retains the French sound /ʒ/. Pl. **J's**, **Js**.

Kk

K, k /keɪ/.

The eleventh letter of the modern English alphabet and the tenth of the ancient Roman one, corresp. to Greek *kappa*, Phoenician and general Semitic *kaph*. The sound denoted by the letter in English, as in Greek and Latin, is the voiceless velar plosive consonant /k/. At an early period of Latin orthography, the letter C (orig. repr. Greek *gamma*) was used for the k sound, and the letter K itself fell into disuse, except in a few archaic spellings. In Old English, K was merely a supplemental symbol occasionally used instead of C for the velar sound. After the Norman Conquest, in accordance with Norman usage, C was retained for the velar only before *a, o, u, l,* and *r*, and K was substituted for the same sound before *e, i, y,* and (later) *n*. Hence, in native words, initial K now appears only before *e, i, y,* and before *n* (= Old English *cn-*), where it is no longer pronounced in standard English. Medially and finally, K is used after a consonant (***ask***, ***twinkle***), or long vowel (***make***, ***like***, ***week***); after a short vowel, *ck* is used instead of *cc* or *kk*, but the unstressed suffix, formerly *-ick* (***musick***), is now *-ic*, though, when a suffix in *e* or *i* follows, K reappears (***traffic***, ***trafficker***, ***trafficking***). Beside native K words, largely confined to *ke-, ki-,* and *kn-*, there are now many foreign words of recent adoption, in which K may also precede *a, o, u, l, r,* and *h*. In words from Greek K is also usu. retained rather than Latinized to C, and in some cases, notably words in *kilo-*, K represents Greek *chi*. Pl. **K's**, **Ks**.
